

OpenMRS

Community Infrastructure Update
9 September 2010

OpenMRS® is a community-developed, open-source, enterprise [electronic medical record system](#) platform. We've come together to specifically respond to those actively building and managing health systems in the developing world, where AIDS, tuberculosis, and malaria afflict the lives of millions. Our mission is to foster self-sustaining health information technology implementations in these environments through peer mentorship, proactive collaboration, and a code base that equals or surpasses proprietary equivalents. You are welcome to come participate in our community, whether by implementing our software, or contributing your efforts to our [mission!](#)

One Year Ago....

Bringing “open” to health care.

OpenMRS is a global leader in open technologies and open standards in health care. It isn't just open software, we strive to be open and transparent in everything we do, and encourage our collaborators to do the same.

Learn how groups around the world have discovered the power of open architecture in health care IT.

 Our wiki has moved to wiki.openmrs.org. [Read more.](#)

Added by Michael Downey, last edited by Burke Mamin on Sep 02, 2010 (view change)

Welcome to the new OpenMRS Wiki! We are working hard to grow the OpenMRS community, since we believe this is the best way to help patients within developing countries through a robust and extensible medical record system foundation. The unrelenting pandemic of HIV/AIDS along with the burden of malaria and drug-resistant tuberculosis demand coordinated and rapid responses. Working together, we hope to reduce the amount of redundant efforts in collecting and managing medical information in these settings. We hope you can use and expand the information in this wiki to enhance communication and collaboration.

User Guide
Once you've got OpenMRS installed, consult this user guide for information about customization and usage "in the field".

Developer Documentation
Whether you're a new developer or have been working on OpenMRS for a long time, keep an eye on this page for reference and "how-to" information about writing code for the OpenMRS platform.

Module Developer Documentation
Platform developers create add-on modules for OpenMRS and leverage our API to build new applications.

Introduction

Reminder: Development discussions should not occur within tickets; rather, development discussions should happen on the developers mailing list.

If you see involved development (design) discussions happening within a ticket, please reply to them on the developer mailing list and then add a comment to the ticket stating that "This is a good design discussion, I've added some thoughts on the dev list" along with a link to your post on the dev list. Once design or other development ideas have been discussed and conclusions made, then those can be summarized in a comment on the ticket.

Forgot your ID or password? Manage your new OpenMRS ID at <http://id.openmrs.org/>. (Active JIRA accounts were migrated to OpenMRS ID on 1-July.)

Thank you!
